EXPERIENCE

Bruce McMahon is experienced in investigation, analysis, and the design of corrective measures to mitigate problems with the integrity of all aspects of the building envelope. He joined WJE in 2004 and has thirty-five years of architectural, project management, and construction management expertise. Projects range in size from individual residential units to three million square feet.

Prior to joining WJE, Mr. McMahon was a vice president with the Sunland Group, a project and construction management firm. His services included design review, value engineering, cost estimating, field management of City of Houston construction projects, and project management of design projects at NASA, Johnson Space Center. In former positions, including ownership of a full-service architectural firm, Mr. McMahon performed a full range of services from site assessment and selection through the one-year warranty period.

REPRESENTATIVE PROJECTS

Architectural Testing

- Condominium Tower - Dallas, TX: Diagnostic spray water testing to investigate water leakage of the building envelope; repair design and construction phase services

Coatings and Sealants

- AT&T Stadium - Arlington, TX: System design of the seating bowl waterproofing, coating and sealants; construction phase services

EIFS, Stucco, Plaster

- Dallas/Fort Worth International Airport, Terminal Renovation and Improvement Program - TX: Stucco and plaster system design review and construction phase services for all terminals

Masonry

- Texas Tech University, Architectural Building - Lubbock, TX: Investigation of remedial masonry work following identification of new areas of distress; repair design and construction observations
- 555 Republic - Plano, TX: Investigation and remedial repairs following brick masonry facade failure

Peer Review

- City of Frisco Multiuse Center: Frisco, TX: Review of construction documents, design of revision recommendations, and construction observation services

Roofing and Waterproofing

- AT&T Stadium (Dallas Cowboys' Football Stadium) - Arlington, TX: Systems consulting on below-grade waterproofing, glazing, veneers, single-ply roofing, and fabric panels; construction phase services
- Mary Kay Headquarters - Dallas, TX: Design of below-grade waterproofing system; construction phase services
- Globe Life Field (Texas Rangers Ball Park) - Arlington, TX: Consulting on below-grade waterproofing, window systems, roofing, and other aspects of the building envelope; construction phase services

Stone Cladding and Paving

- Dallas/Fort Worth International Airport, Terminal B Stinger - TX: Nondestructive and diagnostic testing and assessment of distressed overlay paving system; reporting and schematic repair recommendations

Water/Air Leakage Assessment

- Tecnologico de Monterrey University - Mexico City, Mexico: Air/water leakage diagnostic testing and assessment of building envelope; reporting and schematic repair recommendations

Windows/Curtain Walls/Skylights

- First Baptist Church - Wichita Falls, TX: Investigation of leakage in new curtain wall, windows, and ornamental glass entry tower; repair recommendations, observation, and testing services
- Condominium Tower - Plano, TX: Investigation of pitted and scratched exterior glazing units, repair recommendations, and repair observations
- Office Tower - Mexico City, Mexico: Investigation of distorted and failed capillary system in insulated glazing units, repair recommendations, consultation, and repair observations
