EXPERIENCE

Everett VerSchave primarily works in the areas of condensation, moisture, and water leakage investigations. Many of these projects are followed through from understanding the sources, providing various repair options with methodology, generating construction documents, and observing repairs. Mr. VerSchave's projects often involve working closely with repair contractors to evaluate and respond to field conditions uncovered during the execution of the work.

Mr. VerSchave is also experienced in brick and limestone veneer masonry assessment and repair; thin brick and adhered stone; EIFS and stucco facades; horizontal and below-grade waterproofing; window, water, and air infiltration testing; and extensive repair observations. He is also routinely involved in the review of design documents, the evaluation of construction and design deficiencies of new and existing buildings, and litigation support for design and construction claims.

REPRESENTATIVE PROJECTS

Water/Air Leakage Assessment

- Hiawatha Recreation Center - Denver, CO: Water leakage investigation and repair
- Hotel - Kohler, WI: Water leakage investigation and repair
- Hotel - Philadelphia, PA: Water leakage investigation and repair
